THE STEPHEN HOYT'S SONS CO., Inc.

NURSERYMEN
NEW CANAAN, CONNECTICUT

GENERAL INFORMATION

This list cancels all previous quotations, and these prices are subject to change, according to market conditions.

TRADE TERMS: All invoices are net, payable 30 days from date. Cash discounts 2 per cent, 10 days.

CREDIT: We are pleased to extend credit to customers of known responsibility. Persons unknown to us should furnish us with the names of three firms in the trade with whom they have credit relations.

CLAIMS: No claims for rejections or deficiencies will be allowed unless made within 10 days after receipt of goods. In case of loss by delay or damage in transit, adjustment must lie between consignee and carrier, but we will gladly render any aid possible in adjusting claims.

SHIPMENTS: By express, prompt delivery in good order is reasonably sure. Freight shipments are entirely at purchaser's risk, after we have delivered goods to railroad or steamship in good order and have taken proper bills of lading.

In absence of shipping instructions, we use our discretion as to method and route.

MOTOR TRANSPORTATION: Deliveries may be made by motor truck at prices based on load and distance, this service being a matter of special arrangement.

CERTIFICATE OF INSPECTION: Our nurseries are carefully examined each year by inspectors of the state, and each shipment bears the Entomologist's Certificate.

GUARANTEE: In growing and furnishing all nursery stock we use the greatest care to have it true to name, and will replace any that may prove untrue; but we give no warranty, express or implied, as to description, quality, productiveness, or any other matter, of nursery stock, seeds, bulbs, or plants we sell. For any error we shall not be liable for more than the purchase price. Every purchase from us is made on these terms.

If any plant purchased of us dies within a year from the time of planting, from causes other than abuse or neglect, and the account has been paid within 30 days from date of invoice, we will resupply them, at one-half the original price paid, with other plants of as near similar kind, grade and size as we have in stock at the time of replacement. We thus divide losses, even though we have no control over their transit, planting, maintenance, or weather conditions, all of which are quite as vital to the success of newly planted stock as anything within our control. Such replacements, however, must be made within one year from date of invoice.

(List on Application)

Paeonies—50c each.

FRUIT TREES AND SMALL FRUITS

GROWN IN NEW ENGLAND. WELL ROOTED, CLEAN AND THRIFTY.

Distance between Trees or Plants in Plantations
Standard Apples, 30 to 40 feet apart each way. In poor soil, 25 feet may be enough.

Standard Pears and Cherries, 20 feet apart each way.
Cherries will do at 18 feet, and the dwarf-growing sorts, Dukes and Morellos, even at 16 feet.

Standard Plums, Peaches, and Apricots, 16 to 18 feet

apart each way.

Quinces, 10 to 12 feet apart each way.

Dwarf Pears, 10 to 12 feet apart each way. The greater distance is better where land is not scarce.

Dwarf Apples, on Paradise stock (bushes), 6 feet apart.

Currants, Gooseberries, and Raspberries, 3 to 4 feet apart.

Blackberries, 6 to 7 feet apart.

Grapes, 8 to 10 feet apart.

Strawberries

The number of plants required for an acre at any given distance apart, may be ascertained by dividing the number of square feet in an acre (43,560) by the number of square feet given to each plant, which is obtained by multiplying the distance between rows by the distance between the plants. Thus, Strawberries planted 3 by 1 foot give each plant 3 square feet, or 14,520 plants to the acre.

APPLES

The following list of Apples embraces varieties which have been tested and can be recommended as the very best for general cultivation. All Apples are furnished in standard sizes, unless dwarf are specified.

Prices: 2 to 3 yrs., 5-7 ft., \$1.25 each, \$10.00 per 10

GRAPES

If planted for fastening to a trellis or arbor, should be planted twelve feet apart; but if tied to stake, six feet apart. The holes should be dug not less than four feet wide and two feet deep. Burying bones under the roots makes the vines much more prolific, and the fruit of better quality. The bones should be put in the bottom of the hole and covered with fine soil, then pour in a little water to settle the dirt among the bones; then fill up with mellow soil to within five or six inches of the top; cut off the bruised and broken roots; straighten the roots to their natural position and cover with fine mellow soil about two inches, packing it carefully with the hand, then sprinkle on sufficient water to moisten the roots, fill up the hole and press down the dirt. A stake should be placed with each vine at the time of setting six or seven feet high. The first year train one shoot only up to the stake, pinching off all others, and also the latter or side shoots that appear during the first season; the following spring cut the vine down to within three or four buds off the ground.

The next season allow but two of the strongest buds to throw out shoots. These, in the fall, will be from five to seven feet long and should be fastened to the lower part of the trellis. When growth commences, pinch the buds so that the shoots will be from ten to twelve inches apart. As they grow train them perpendicularly to the second, third and fourth bars of the trellis, and in the fall the vine, with its fruit, will present the appearance shown in Figure 6, as no fruit should be allowed to set above the second bar of the trellis. During the season when the shoots shall have reached the upper bar of the trellis, they may be pinched to prevent further growth.

Late in the fall, cut back to two buds. The following spring allow but one bud to throw out a shoot, and treat as in the previous year. This system of pruning should be followed each year.

Conover's Colossal. Immense size, color deep green, high flavored.

Palmetto. Earliest and best yielder, largest shoots.

ASPARAGUS

To make an asparagus bed, prepare a place of fine loamy soil, to which has been added a liberal dressing of rich manure. For a garden, set in rows, eighteen to twenty inches apart, with the plants ten to twelve inches apart in the rows. Make a small mound of the soil, over which the roots should be spread, then cover the plants with about three inches of soil. If planted in the fall the whole bed should be covered before winter sets in with two or three inches of coarse stable manure, which may be lightly forked in between the rows as soon as the ground softens in the spring.
